

For over 20 years the Backyard Tree Farm has served as a way for New Mexicans to learn how to care for their piece of the forest. We invite you to join us for the following event.

“Earthworks”: For Passive Water Harvesting & Erosion Control

Saturday, June 19th

***Sandia Ranger District, Tijeras
9:00 A.M. to 10:45 A.M.
Classroom Presentation***

***A. Montoya Elementary School, Tijeras
11:00 A.M. – 12:30 P.M.
Field Presentation of Previously Constructed Earthworks***

Presented By: Jim Brooks (Soilutions) and Krista Bonfantine (Arid Land Ideas)

This presentation will focus on low cost and natural ways for you to work with your land to keep the precious “precipitation” we receive in New Mexico on your piece of the forest rather than allowing it to be washed away along with your land and soil.

Preregistration for this workshop would be greatly appreciated to better anticipate how many handouts to make and how much food to get but if at the last minute your schedule opens up feel free to come join us.

For more information or to preregister for his event contact: Carol at Ciudad Soil and Water Conservation District: 761-4986 or carol.moritz@nm.nacdnet.net.
